Office of Institutional Research *and* Effectiveness

# Identifying Effective Measures and Targets

Christiane Herber-Valdez, Ed.D.

# Training Objective

This training session is designed to assist faculty and staff in developing effective measures and targets for their Institutional Effectiveness plans

# Structure of Unit Planning: Measures

- After expected outcomes are established, even more specific measures and targets should be developed
  - Measures and targets should align with each outcome, so that you end up with an upside-down pyramid scheme that is all aligned and cohesive

# Measures

- Measures identify methods we will use to determine whether we are achieving our expected outcomes
- Measures provide evidence that documents the progress we have made toward achieving our objectives and expected outcomes
- When expected levels of achievement are not met, measures help us identify areas for improvement
- Examples include:
  - Certification/licensing exam pass rates, students entering health careers, satisfaction surveys, training/workshop surveys, compliance reports, etc.
- Process indicators can also be used as measures
  - Number of workshops offered, number of students interviewed, number of people trained, etc.
  - Such activities are often documented with office procedures/documents, i.e. sign-in sheets, consultation logs, etc.

# Direct vs. Indirect Measures

**Direct Measures** involve actual performance or direct demonstration of learning or efficacy.

- Direct measures are powerful because they provide data that correlate exactly with the objective and expected outcome

**Indirect measures** involve a report on perceived learning or efficacy, rather than a direct demonstration.

- Therefore no IE plan should consist of indirect measures only

# Direct and Indirect Measures: Examples for Academic Programs

Direct Measures	Indirect Measures
<ul style="list-style-type: none"><li>• Comprehensive exams</li></ul>	<ul style="list-style-type: none"><li>• Entrance/Exit interviews</li></ul>
<ul style="list-style-type: none"><li>• Publications or conference presentations</li></ul>	<ul style="list-style-type: none"><li>• Focus groups</li></ul>
<ul style="list-style-type: none"><li>• Performance evaluations</li></ul>	<ul style="list-style-type: none"><li>• Job/graduation placement statistics</li></ul>
<ul style="list-style-type: none"><li>• Internship/Portfolio evaluation</li></ul>	<ul style="list-style-type: none"><li>• Graduation and retention rates</li></ul>
<ul style="list-style-type: none"><li>• Pass rates on certification or licensure exams</li></ul>	<ul style="list-style-type: none"><li>• Alumni surveys</li></ul>
<ul style="list-style-type: none"><li>• Capstone project, senior thesis or performance</li></ul>	<ul style="list-style-type: none"><li>• Observations</li></ul>

**Direct measures** require that learners display the extent of their learning by doing something, such as responding to a test question or completing an assignment.

# Direct and Indirect Measures: Examples for Administrative Units

## Direct Measures

- Quantitative reports on service delivery
- Quantitative reports on accuracy/efficiency/completion
- Performance evaluations/appraisals
- Contact hours with clients/students
- Financial reports

## Indirect Measures

- Focus group discussions
- Job satisfaction surveys
- Client/student satisfaction surveys
- Observations
- Meeting discussions

# More Measures for Administrative Units

**Things you can measure:**

**Demand, Quality, Efficiency, Effectiveness, Perception of Services, Satisfaction**

Examples	
• Student/Staff satisfaction surveys	• Number of users
• Count of program/event participants	• Growth in participation
• Number of complaints/suggestions	• Average wait or service time
• Comparisons to professional organization’s best practices	• Statistical reports
• Number of applications	• Staff training hours and staff trained
• Processing time for requests	• Opinion/satisfaction surveys
• External review	• Focus groups
• Number of staff/students served	• Dollars raised, dollars saved

# Measures in IE Planning

## **Guidelines for Developing Measures/Metrics:**

- Develop **at least one measure** for every expected outcome
- You can have multiple measures per outcome
- You might have one measure that aligns with multiple outcomes
- Be sure measures are **appropriate** and **align with outcomes** and objectives
  - Do the chosen measures provide data on what you need to know?
- Utilize a **variety of measures**
  - Some of it you may already be collecting...
  - Build an inventory of existing evaluation and assessment activities

# Common Mistakes to Avoid

- Simply restating the outcome/objective as a measure
- Not aligning the measure with expected outcomes
- Inserting actions (activities) in place of measures
- Utilizing measure that do not measure what you need to know to determine progress
  - Measures need to provide useful, meaningful data

# Measures: Administrative Units

## ENSURE

- Measures align well with the stated objectives/outcomes. In other words, measures are appropriate to document progress toward achieving the stated objectives/outcomes
- A variety of measures are used
- A concise and well-written description of each measure is provided

## AVOID

- Measures do not align well with the stated objectives/outcomes. In other words, some measures are not appropriate to document progress toward achieving the stated objectives/outcomes
- Limited measures are used
- Descriptions of measures that are limited, confusing, or excessive

# Measures: Academic Programs

## ENSURE

- Measures aligned appropriately with SLO's (at least one measure per outcome)
- Indicative of learning at the program level
- Include a combination of direct and indirect indicators of student learning

## AVOID

- Measures that do not align appropriately with SLO's
- Indicative of learning at the course level
- Include mostly direct or mostly indirect indicators of student learning

# Structure of Unit Planning: Targets

- For each measure, an achievement target must be established; in other words, **how or when will you know if you've been successful?**
- Targets communicate clearly the expected level of accomplishment for the measure

# Targets

- Targets must specify something quantifiable (a number, percent, rating, score, or level of proficiency)
- Targets can offer directionality (an increase or decrease)
- Targets should change to reflect improvement over time
- Sometimes an anticipated date for completion can be a target, if no other targets seem appropriate

# When Setting Targets for Both Academic and Administrative Units...

## ENSURE

- All describe specific criteria for success
- Appropriately challenging and attainable in the given timeframe
- The context for each target is provided, as relevant
- Each measure has a related target

## AVOID

- Vague or unclear criteria for success
- Targets that are minimally challenging or unattainable in the given timeframe
- Targets are incomplete or irrelevant
- Targets are not provided for some measures

# Examples from Academic Programs

- At least 80% of students will pass the National State Board of Nursing Exam (NCLEX)
- The average first time pass rate on the USMLE Step One will be at or above the national average
- Students will achieve at or above the 6<sup>th</sup> percentile on each of the 6 NBME Shelf Exams
- The average rating will be above average or outstanding (4 or above) on employer/supervisor evaluations

# Examples from Administrative Units

- Eighty-five percent (85%) of new TTUHSC employees hired will have completed the required Institutional Compliance Orientation training within 60 days of hire
- Development of required state THECB reports will be completed prior to the submission deadline and submitted on or before the deadline on an annual basis
- On August 31, 2015, 100% of required Conflict Management Plans for TTUHSC researchers will be up-to-date and on file with the Research Office

# Example: Office of Institutional Research and Effectiveness:

## Goal

To promote institutional effectiveness through ongoing, systematic planning, evaluation and assessment efforts in order to support faculty and staff in achieving the institutional mission.

## Objective

To support TTUHSC El Paso units with training and guidance related to IE planning and to IE plan development.

## Expected Outcome

Each TTUHSC El Paso unit will develop and utilize an effective evaluation/assessment plan for annual IE planning.

## Measures

*Review of assessment plans:* All assessment plans will be reviewed using a **locally developed rubric**. Rubric criteria will relate to the effectiveness of each unit's Mission Statement, objectives, outcomes, measure/target levels, findings, and analysis.

# Example: Office of Institutional Research and Effectiveness

## Goal

To promote institutional effectiveness through ongoing, systematic planning, evaluation and assessment efforts in order to support faculty and staff in achieving the institutional mission.

## Objective

To support TTUHSC El Paso units with training and guidance related to IE planning and to IE plan development.

## Expected Outcome

Each TTUHSC El Paso unit will develop and utilize an effective evaluation/assessment plan for annual IE planning

## Target

All assessment for educational programs and administrative units will be reviewed on an annual basis by a cross-disciplinary group of peers. On a scale of 0 to 21, the average **score will be at least 15**. (Using the rubric designed for these reviews, 12-17 points corresponds with an Acceptable ranking.)

# Common Mistakes to Avoid When Developing Targets

- Simply restating the outcome/objective as a target
- Failing to put targets in context for the reader
- Combining a target with a measure description

# Remember...

- Measures and targets need to be meaningful to us
- They need to help us gather data we can use to evaluate and assess our efforts
- They need to help us improve our services
